Gastrointestinal Endoscopy

Dear Colleagues,

Gastrointestinal Endoscopy has now become an important modality in the diagnosis and treatment of many GI diseases. Therapeutic Endoscopy is replacing several conventional surgical procedures. Simultaneously dramatic innovations in imaging have resulted in revival of interest in diagnostic endoscopy.

The already established Art of Endoscopy is now being translated into evidence based science. The aim of this workshop is not only to showcase new techniques but also to put into perspective the use of various endoscopic procedures in clinical practice.

The highlights of the course are

- Live Case transmission with active audience participation
- Comprehensive evidence-based didactic sessions on a broad range of endoscopy issues
- Small group intimate discussions with the Masters at the breakfast sessions.

We have an outstanding International and National Faculty to guide us through the course. As registration is limited, kindly register early.

We look forward to seeing you in Hyderabad in February 2009

Sincerely,

D Nageshwar Reddy
