Dear Colleague,

Flexible Endoscopy has evolved as a very powerful tool in the diagnosis and therapy of many Gastrointestinal Diseases. As Endoscopic techniques are becoming more invasive, limitations in Flexible Endoscopy are becoming obvious. Taking the lead from Robotics in surgery, institutions across the world are exploring the feasibility of integrating Robotics into Flexible Endoscopy to improve the overall outcomes. Asian Institute of Gastroenterology had taken the initiative to bring together Technocrats, Clinicians and the Industry for a brain storming meet to take forward the concept of this future integration.

Expert Technocrats and Renowned Gastrointestinal Clinicians from USA, Singapore and India are participating in this two day meet , which would also showcase the available technology by the faculty.

The registrations for the meeting are limited. Interested Technocrats and Clinicians are requested to contact the Secretariat on or before 25th June 2011 for registration.

Looking forward to seeing you in Hyderabad.
